BOARD / MANAGEMENT PAPER · MAY 2024

Aravest's Next Phase

Build a credible post-SMFL track record and institutional platform for long-term growth.

Aravest Pte Ltd · Private & Confidential

INTRODUCTION

With integration substantially complete, Aravest’s next phase is institution-building.

Aravest has maintained platform continuity, strengthened governance and begun executing under SMFL ownership.

The next priority is to establish the post-SMFL investment record required to support investor confidence and long-term growth.

THIS PAPER SETS OUT THREE THINGS

01

The institution Aravest is building

The Aravest Way — the standards that remain constant as the platform grows.

02

Why transaction execution is the immediate priority

Transactions create the post-SMFL evidence investors require.

03

How two parallel pathways develop the platform

Track Record Building and Scale Acceleration, pursued simultaneously.

01

Institutional Foundation

The standards, philosophy and identity that remain constant as the platform grows.

Development pathway

From 2027 to 2029, the primary focus is to build the post-SMFL track record required to prove Aravest's investment capability.

The priority is to complete multiple transactions, demonstrate outcomes through the investment lifecycle and establish repeatability — the foundation for future institutional capital formation and scale.

2025

Integrate & begin proving

Complete the initial integration, maintain platform continuity and begin demonstrating execution under SMFL ownership.

2026

Establish institutional identity

Introduce The Aravest Way, deepen governance and investment discipline, continue building visible post-SMFL evidence.

2027–2029

Build proof through transaction track record

Complete selected transactions, demonstrate investment outcomes and establish repeatability across defined strategies.

~2030 ONWARD

Convert proof into scale

Use the accumulated track record to raise larger and more repeatable pools of institutional capital.

> The timing is directional. The pace of proof-building will depend on transaction execution, market conditions and the availability of suitable opportunities.

The Aravest Way

The Aravest Way sets the standards for how Aravest conducts its business and invests.

> Transactions establish the investment record. Consistent judgement, conduct and accountability establish the institution.

OUR FIRST PRINCIPLE

Investment management is a responsibility before it is a business.

OUR VALUES — HOW WE CONDUCT OUR BUSINESS

EXCELLENCE

The quality of our thinking

Apply disciplined analysis, preparation, execution and communication, and continually raise the standard expected of the platform.

TRUST

The way we behave

Act with integrity, transparency and fairness toward investors, shareholders, partners, lenders and colleagues, particularly when circumstances are difficult.

ACCOUNTABILITY

How we take ownership

Own decisions and outcomes, respond when the facts change and remain responsible through the full investment lifecycle.

Investment philosophy

How the values are applied to investing.

Investment principle	Application
Recognising Value	Identify genuine value gaps, form an independent judgement and define how value will be realised.
Partnership	Define where Aravest adds value and secure partners for the other capabilities the investment requires.
Stewardship of Capital	Manage capital through the full investment lifecycle with responsibility for capital preservation and value creation.
Risk & Resilience	Identify risk, accept it deliberately, build resilience and adapt when the facts change.
Fit for Purpose	Keep the principles constant and tailor the structure and strategy to each investment.

WHY THIS MATTERS FOR LONG-TERM GROWTH

Consistency as the platform grows
A common constitution enables consistent standards across countries and strategies as the platform grows.

Trust with investors and partners
A clear basis for understanding how Aravest will act through the full investment lifecycle.

Repeatability without dilution
Codified principles allow Aravest to repeat and scale strategies without diluting institutional standards or identity.

Values-led. Value-focused.

The Aravest Way governs how we invest; identifiable value determines where we deploy.

VALUES-LED

The standards remain constant

- **Excellence:** disciplined thinking, underwriting and execution.
- **Trust:** alignment, transparency and institutional governance.
- **Accountability:** ownership of decisions, risks and investment outcomes.

VALUE-FOCUSED

Deployment follows identifiable value

- A genuine value gap, mispricing or market dislocation.
- A clear and executable value-creation plan.
- Complete capabilities, internally or through secured partners.
- A credible route to stabilisation, investor participation or eventual exit.

> Aravest will remain sector agnostic, but every investment must have an identifiable value opportunity, an executable business plan and complete capability coverage.

02 Proofing

Why transaction execution is the immediate priority, and the two pathways and warehousing that make it possible.

Building the post-SMFL track record

Investors require repeated evidence of execution and outcomes. Transactions create that evidence.

Investors require evidence that Aravest can exercise investment judgement, execute the business plan and deliver outcomes under SMFL ownership.

WHAT EACH TRANSACTION MUST DEMONSTRATE

1
Investment judgement
Macro view · sector preference · deal screening & selection

↓

2
Transaction execution
Underwrite, secure and complete

↓

3
Unlocking value
Execute the business plan

↓

4
Investment outcome
Demonstrate performance and, where applicable, realisation

HOW TRANSACTION EVIDENCE BECOMES AN INVESTABLE TRACK RECORD

One transaction
A proof point. Demonstrates Aravest's judgement and execution on a specific investment.

↓

Multiple transactions
A track record. Builds a body of post-SMFL evidence across investment outcomes and market conditions.

↓

Repeatable strategy
A basis for capital formation. Gives investors the proof required for repeat commitments and, over time, discretionary capital.

Two parallel pathways

Aravest will pursue both pathways simultaneously to build proof and develop the platform.

	Pathway 1 — Track Record Building	Pathway 2 — Scale Acceleration
Primary purpose	Build multiple proof points and establish repeatability across defined strategies.	Build a major proof point while accelerating AUM and institutional relevance.
Typical opportunity	Transactions that can be pursued within the existing sponsor-capital programme, allowing capital to be diversified across several investments. Typically, limited equity investment requirements.	Transactions whose scale, asset quality or strategic significance requires a separate capital decision and can support meaningful institutional participation. Typically, large equity investment requirements.
Capital profile	Existing USD 300M support can be deployed across several investments.	Requires transaction-specific capital that may be materially greater than the existing programme.

	Pathway 1 — Track Record Building	Pathway 2 — Scale Acceleration
Risk profile	Lower single-asset concentration because capital is spread across several investments.	Higher single-asset concentration and transaction-specific capital exposure.
Expected AUM effect	AUM may grow gradually, remain flat or decline temporarily.	A single transaction may produce a material or step-change increase in AUM.

Each Scale Acceleration opportunity will be presented separately to the Board, and any capital commitment will remain entirely at the Board's discretion on a case-by-case basis.

Pathway 1 — Track Record Building

Deploy the existing USD 300M support across several transactions to build multiple proof points and diversify investment risk.

1
Establish the fund and acquire

↓

2
Execute the business plan

↓

3
Establish investment evidence

↓

4
Introduce investors into the fund

↓

5

Release capital where possible

The primary objective is to establish a diversified body of post-SMFL investment evidence. Capital recycling remains important because sponsor capital is finite, but it may take time. The immediate priority is to create the investment record from which longer-term capital efficiency can develop.

Each transaction will be structured as a fund from the outset. Once the investment and business plan are sufficiently established, Aravest will seek to introduce investors through either a single-asset structure or an aggregated portfolio. This may release sponsor capital for subsequent deployment, but the timing will depend on investor demand.

Product creation for Pathway 1

Two routes for bringing investors into completed transactions.

	Single-asset fund or SMA	Portfolio fund
Approach	Introduce one or more investors into the fund holding a specific investment.	Aggregate related investments under a defined strategy, then introduce investors into a portfolio fund.
Timing	May occur earlier once the asset and business plan are sufficiently established.	Requires more time because Aravest must first assemble a portfolio of sufficient scale and coherence.
Investor relevance	The ticket may suit family offices and smaller institutions but may be below the minimum required by large institutions.	Scale and diversification make the portfolio more relevant to larger institutional investors — for example, pension and sovereign wealth funds.
Strategic benefit	Creates an individual post-SMFL proof point and may release sponsor capital earlier.	Creates multiple proof points, demonstrates repeatability and can establish larger, more durable AUM with greater institutional relevance.
Sponsor capital duration	Potentially shorter.	Potentially longer while the portfolio is assembled.

Pathway 2 — Scale Acceleration

Pursue selected institutional-scale opportunities that can create a major proof point, materially increase AUM and attract large institutional investors.

STRATEGIC BENEFITS

- **Major proof point:** a significant transaction demonstrates that Aravest can secure, execute and manage an institutional-quality investment under SMFL ownership.
- **Material AUM growth:** one transaction can add the AUM that would otherwise require several Pathway 1 investments.
- **Wider investor pool:** asset quality and ticket size make the opportunity relevant to large institutional investors.
- **Faster platform development:** successful execution strengthens fundraising credibility and institutional relevance.

CAPITAL AND RISK IMPLICATIONS

- **Higher capital requirement:** the opportunity may require capital materially beyond the existing USD 300M programme.
- **Higher concentration:** a larger amount of capital is exposed to one asset, market and business plan.

> Scale Acceleration complements, rather than replaces, Track Record Building. The quality of the asset and the scale of the opportunity can create a wider investor pool, particularly among large institutions that require meaningful deployment capacity.

Warehousing is essential

Warehousing is essential to secure transactions and build the track record.

Seller execution and investor diligence operate on different timetables. Sellers require committed capital and transaction certainty, while investors require time and generally prefer to assess a sufficiently secured opportunity. Warehousing bridges this timing gap.

INVESTOR TIMETABLE

Investors require diligence and a sufficiently secured opportunity

Investors need time to assess the asset, business plan, manager, structure and risk. Many will not commit until the opportunity is sufficiently advanced or secured.

TRANSACTION TIMETABLE

Sellers require committed funding and execution certainty

Competitive transactions must close within the seller's timetable, often before an institutional fundraising process can be completed.

> Warehousing provides the committed acquisition capital required to secure and complete transactions before third-party capital is available.

Without warehousing, Aravest cannot reliably secure transactions or establish the track record required to raise institutional capital.

WITHOUT WAREHOUSING

No committed acquisition capital

↓

No executable transaction

↓

No post-SMFL proof

↓

No credible basis for future fundraising

WITH WAREHOUSING

Secure and complete transactions

↓

Execute the business plan

↓

Establish post-SMFL proof

↓

Raise third-party capital for the fund and future strategies

03 The Pathways in Practice

Completed transactions and current pipeline that illustrate how the two pathways operate.

How the two pathways work

Example of completed transactions: Project Marlin and Conrad Seoul illustrate how the two pathways operate in practice.

PATHWAY 1 · TRACK RECORD BUILDING EXAMPLE

Project Marlin — Hotel Miramar to DoubleTree by Hilton

Equity USD 60M

Aravest acquired Hotel Miramar through an Aravest-managed fund with Wee Hur as the initial investor and partner. The hotel is undergoing a comprehensive AEI ahead of its rebranding as DoubleTree by Hilton Singapore Robertson Quay.

TRANSACTION EXECUTION

The acquisition has been completed and the AEI is now in progress.

INVESTMENT EVIDENCE

Delivery of the AEI, rebranding, operating performance and cash yield will provide visible post-SMFL proof.

SINGLE-ASSET CAPITAL FORMATION

Post-AEI, the stabilised hotel is expected to be more institutionally investable; the initial investor pool is likely to comprise family offices and smaller institutions.

PORTFOLIO POTENTIAL

May seed a broader hospitality and living portfolio, widening the future institutional investor pool.

PATHWAY 2 · SCALE ACCELERATION EXAMPLE

Conrad Seoul — institutional scale and investor relevance

Equity USD 140M

Sponsor-supported capital enabled Aravest to secure and complete the acquisition. The quality of the asset and scale of the transaction created relevance for a wider pool of investors, including large institutions.

TRANSACTION EXECUTION

Warehousing provided the certainty required to secure a significant institutional-quality asset.

INSTITUTIONAL PARTICIPATION

Following acquisition, GIC and M&G entered the investment at meaningful ticket sizes.

CONTINUITY OF MANAGEMENT

Aravest continued to manage the investment as sponsor capital was released.

PATHWAY EVIDENCE

Demonstrates how scale and asset quality can accelerate AUM, institutional relevance and the post-SMFL record.

Pathway 1 pipeline opportunities

Track Record Building — build multiple proof points and establish repeatability across defined strategies. *Examples of pipeline transactions:*

OPPORTUNITY

Project Eagles — Courtyard by Marriott, Suwon, Korea

Equity USD 35M

TRANSACTION PROFILE

Potential acquisition of an operating, 288-room hotel strategically located near the Samsung headquarters in Suwon. This is an off-market transaction secured at favourable acquisition pricing.

STRATEGIC ROLE

A high-quality, well-located hotel that can add a post-SMFL hospitality proof point within the existing capital programme and support subsequent single-asset capital formation.

OPPORTUNITY

Project Braves — Brisbane PBSA

Equity USD 20M

TRANSACTION PROFILE

Potential acquisition and development of a purpose-built student accommodation (PBSA) project in Brisbane.

STRATEGIC ROLE

This asset will form part of a broader PBSA strategy for Aravest, which aims to aggregate a portfolio of highly sought-after PBSA assets across Australia.

Pathway 2 pipeline opportunities

Scale Acceleration — build a major proof point while accelerating AUM and institutional relevance.

Examples of pipeline transactions:

OPPORTUNITY

Project Falcon — Marina One

Equity USD 500M

TRANSACTION PROFILE

Potential joint venture with Hongkong Land to pursue the acquisition of Marina One, a landmark integrated development located in Singapore's Marina Bay CBD.

STRATEGIC ROLE

Asset quality and transaction scale can create a major post-SMFL proof point, deliver a material increase in AUM and support participation by large institutional investors.

OPPORTUNITY

Project Guardians — GR.iD Redevelopment

Equity USD 180M

TRANSACTION PROFILE

Potential distressed acquisition and redevelopment of an underperforming shopping centre, transforming it into a flagship purpose-built student accommodation project in Singapore.

STRATEGIC ROLE

Major track-record building in the living sector. The Gross Asset Value (GAV) of the project upon completion is projected to exceed USD 600M, positioning it to serve as an anchor asset for a future Aravest living REIT.

OPPORTUNITY

Project Slingers — Telok Ayer Hotel Development

Equity USD 300M

TRANSACTION PROFILE

A jointly branded Singapore Hospitality Development Fund in partnership with City Developments Limited (CDL) to acquire a prime land site in core Raffles Place. The strategic plan is to warehouse the acquisition and execute a joint sell-down with CDL post-acquisition.

STRATEGIC ROLE

This acquisition will serve as a cornerstone of a broader, long-term partnership with CDL in Singapore’s hospitality sector.

Transaction names, figures and status are indicative and should be refreshed by the relevant transaction teams before Board circulation.

04 Investment Framework

Where and why Aravest invests, and the institutional standards applied to every structure.

Value creation

Sector and asset selection identifies *where* we invest; the value-creation plan determines *why* and *how* we invest.

Value-creation playbook	Typical application
Repositioning & Lease-up	Improve occupancy, tenant mix, rental performance and market positioning.
Asset Enhancement & Conversion	Undertake refurbishment, AEI, change of use or physical repositioning.
Development / Redevelopment	Ground-up development or material redevelopment where the development capability and risk controls are established.
Operational Improvement	Improve performance through stronger management, branding, service delivery or specialist operating partners.
Market or Capital Dislocation	Invest where pricing, ownership constraints, refinancing pressure or capital scarcity create an attractive entry point.
Aggregation & Portfolio Formation	Combine related investments into portfolios or repeatable strategies capable of attracting institutional capital.

A CAPABILITY-DRIVEN INVESTMENT STRATEGY

Capability coverage of Aravest and our partners will drive our investment decisions. Aravest will proceed only when every capability required for deal origination, underwriting, financing, development, operations, asset management and realisation is covered internally or through secured partners.

Aravest does not need to perform every function internally. It must secure the complete capability set and remain accountable for the outcome. For development, hospitality operations, data centres and other specialist activities, the required partner must generally be identified and sufficiently secured before investment commitment.

Near-term investment focus

Deployment focus: opportunities with distinctive value propositions that Aravest has the capability to execute.

This focus guides origination and capability development without fixed capital-allocation weightage. Every transaction must continue to demonstrate an identifiable value opportunity and an executable business plan.

ESTABLISHED SECTORS

Commercial

Strategic role. Aravest's principal investment base, supported by long-term experience, local market knowledge and proven asset-management capability.

Approach. Prioritise opportunities where repositioning, lease-up, AEI, redevelopment or market dislocation can create a clear and defensible value proposition.

NEAR-TERM TARGET PRIORITIES

Living & Lodging

Strategic role. Build repeatable strategies in sectors supported by structural demand and where operating capability can improve investment outcomes.

Approach. Pursue selectively through experienced operating, development or local partners, with clear alignment and complete capability coverage.

INVEST-LED OPPORTUNITIES

Special Situations, Bespoke Products & Emerging Sectors (e.g. Data Centres)

Strategic role. Investor-led opportunities where market dislocation creates a compelling value case.

Approach. Consider where the value case is compelling and the required specialist development, operating and technical capabilities are identified and secured.

Institutional structuring principles

The institutional standards applied to every Aravest structure.

Investors

↓

Fund vehicle

↓

Investment SPV / borrower

↓

Underlying asset

Institutional standard	Aravest approach
Ring-fenced Asset Holding Structure	Assets, liabilities and obligations are generally contained within the relevant fund, investment vehicle and asset-level entities.
Responsible & Risk-adjusted Capital Structure	Level of leverage, liquidity, maturity, refinancing, covenant resilience and relevant downside scenarios should be established in accordance with the specific transaction's risk profile, and addressed through underwriting and ongoing management.
Clearly Defined Investor Exposure	Investors' exposure is generally limited to committed capital and customary obligations under the applicable fund documents.
Institutional Governance Structure / Rights	Each structure should provide appropriate decision rights, reserved matters, conflicts management, reporting, valuation and oversight.

Institutional standard	Aravest approach
Non-recourse or Limited-recourse Financing	Financing should generally have recourse only to the relevant borrower, secured assets and expressly agreed transaction-level credit support.
No Manager or Shareholder Recourse	The role of Aravest as manager, or SMFL as shareholder, does not by itself create recourse to either party.

Committed capital is exposed to investment performance

Wider fund and asset liabilities are ring-fenced

Manager or shareholder recourse is not automatic

Exceptions must be explicit and separately approved.

Any guarantee, keepwell, completion support, cost-overrun undertaking, indemnity or other manager- or shareholder-level obligation must be specifically identified, assessed, quantified and expressly approved through the applicable governance process.

Management’s continuing focus

01 Build proof through disciplined execution.

02 Establish a credible and repeatable post-SMFL track record through warehousing.

03 Use that track record to attract third-party capital and create new products.

04 Develop Aravest into a sustainable institutional investment-management platform.
